DETAILED ACTION

*Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1 – 20 and 23 – 27, drawn to a method of producing pharmaceutical or parts of pharmaceuticals or food supplements or parts thereof and the resulting products.

Group II, claim(s) 21, drawn to a drum coater, coating pan, fluidized bed apparatus or spray sifter comprising one or more three-fluid nozzles as spray device.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: groups I and II lack unity of invention because groups do not share the same or corresponding technical feature. Group II is drawn to a device with a particular feature – namely at least one or

more three-fluid nozzles as a spray device. Group I is drawn to a method of producing a product. While the process of group I can utilize a machine such as that recited in group II, the process of group I only requires one or more spray devices and thus the type of equipment present in the two groups is not the same and therefore cannot constitute a common technical feature.

3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Group I, the substrates for pharmaceutical applications or substrates for application as food supplements for humans or animals

#### Species Election Requirement

If group I is elected above, Applicant is required to elect the substrate, the film-forming coating agent and the at least one further substance suitable for said purposes. Examples of suitable elections can be found in claims 5, 6, 9 and 10.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims

subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. The claims are deemed to correspond to the species listed above in the following manner: specific combinations of substrate, film-forming coating agent and further substance are recited in claims 5, 6, 9, 10, 13 and 15.

The following claim(s) are generic: 1 – 4, 17 – 20 and 27.

5. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the various substrates are not regarded as being of similar nature because all of the alternatives do not share a common property or activity. The substrate need not include a pharmaceutical active ingredient, and when such a substance is present, it can acid-sensitive as in claims 5 or 6, alkali-sensitive as in claims 9 and 10 or pigment sensitive as in claim 13. Each substrate is associated with film-forming coating agents and further

substance suitable for said purposes which must be chosen so as to be compatible with the particular properties of the substrate.
